DESCRIPTORS Adults; Comparative Analysis; *Employment; *Income; *Males; *Veterans; *Work Experience

ABSTRACT

The work experience and income of male veterans, aged 20 years and over, were compared with that of their nonveteran counterparts for the calendar year 1981. Analysis of the data provided by the Census Bureau showed that a larger percentage of male veterans than of their nonveteran counterparts, 64 percent and 56 percent, respectively, worked full-time all year round during 1981. As a result, veterans had a higher overall median income than nonveterans. Age differences between the two groups, however, accounted for much of this disparity in income and work experience. Veterans comprised an older group than nonveterans, and consequently fewer of them were at the ages that are at greatest risk of being totally or partly unemployed during the year. (In addition to two tables and four figures within the text of the report, 10 tables are appended that present in greater detail the data discussed in the text.) (YLB)

FOREWORD

This report continues a series of publications by the Office of Reports and Statistics in the area of social and economic characteristics of veterans. It is based on data from the Census Bureau's Current Population Survey for 1981. A related report in this series is Education and Income Characteristics of Veterans, March 1979, Research Monograph 15.

This report describes the work experience and income of male veterans, aged 20 years and over, compared with that of their nonveteran counterparts for calendar year 1981. Analysis of the data provided by the Census Bureau shows that a larger percentage of male veterans than of their nonveteran counterparts worked full-time all year-round during 1981. As a result, veterans also had a higher overall median income than nonveterans. Age differences between the two groups, however, account for much of this disparity in income and work experience. Veterans comprise an older group than nonveterans, and consequently fewer of them are at the ages that are at greatest risk of being totally or partly unemployed during the year.

Mr. Robert Langberg wishes to express his gratitude to Mr. William A. Maloy for providing overall guidance, to Mrs. Barbara Wills for producing the detailed tables on which the report is based, and to Mrs. Sylvia Solomon and Mrs. Gwendolyn Young for typing the report.

ROBERT W. SCHULTZ, Director

INTRODUCTION

This report presents summary statistics concerning the work experience and income of male veterans, aged 20 years and over, compared with that of their nonveteran counterparts for the calendar year 1981. The detailed statistics upon which the report is based are presented in the tables of Appendix B. Work experience is not the same as labor force status; the latter examines whether people were in the labor force, and if they were or were not employed during a given time period. Work experience focuses on the extent of the actual working time within a specified year and it takes into account the fact that an individual may be categorized as unemployed in any given month and yet may have worked throughout the remainder of the year. It also examines whether persons were employed full-time or part-time. The work experience and income data for this report are produced annually by the Census Bureau, based on information collected in the March cycle of its Current Population Survey.

WORK EXPERIENCE OF VETERANS AND NONVETERANS

Of the 28.7 million male veterans in 1981, 23.5 million, or nearly 82 percent, worked during at least some portion of the calendar year (Figure 1 and Table 1).^{1/} Almost two-thirds of the male veterans (64 percent) worked all year, full-time or part-time, while 18 percent worked only part of the year (less than 50 weeks).

More than three out of four male veterans worked full-time during the year, whereas less than six percent of male veterans worked only part-time (less than 35 hours a week). Moreover, most of these part-time veteran workers were employed for only part of the year. Eighteen percent of male veterans did not work at all during 1981.

There was almost no difference between male veterans and nonveterans in the overall percentages of them who worked at some point during the year. Eighty-one percent of the nonveterans worked during 1981, compared with the previously mentioned 82 percent for veterans. However, there were larger differences between veterans and nonveterans in the amount of time worked. Only fifty-six percent of the nearly 45 million male nonveterans worked all year, compared with the 64 percent of the veterans. Age accounts for much of this difference; if the veteran population is age-adjusted to conform with the age profile of the male nonveteran population, only 54 percent of the veterans would have been working on a year-round basis at either a full-time or a part-time job (51.7 percent full-time, 2.6 percent part-time).^{2/}

^{1/} This report was prepared prior to the release of 1980 Census data, and hence the veteran and civilian population figures presented herein are not fully consistent with revised data shown in other reports. This minor discrepancy does not substantially affect the analysis in this report. The goal of this study is to examine the relative work experience and income patterns between veterans and nonveterans, comparisons which would remain essentially constant regardless of whether or not the data are based on 1980 Census figures.

^{2/} The technique of age adjusting is discussed in Appendix A.

Did not work	19.2	10.1	5.7	4.5	5.2	7.0	8.0	11.0	17.3	36.5	61.5	83.0

When one also examines the two groups according to specific age categories, no clear differences in work experience (worked during at least a portion of the year) between veterans and nonveterans are apparent (Figure 2). Both groups had 90 percent or more of their respective populations working at all ages from 25 years to 49 years, with a sharp decline occurring after age 60, to about 16 percent by age 70.

FIGURE 2

PERCENT OF VETERANS AND NONVETERANS WHO WORKED DURING 1981

INCOME BY WORK EXPERIENCE

Veterans' median income was over 50 percent more than that of nonveterans during 1981, \$18,630 vs. \$12,320, respectively (Figure 3 and Table 2). Median income of veterans and nonveterans combined stood at \$14,800. Once more, age was a major factor in accounting for these differences. If the veteran population is again age-adjusted, the veterans' median income would have been only \$14,000, narrowing by 73 percent the difference between the two groups. Veterans' median incomes were higher than those of their nonveteran counterparts in all age groups 30 and above (Figure 4).

FIGURE 3

INCOME OF VETERANS (AGE—UNADJUSTED AND AGE—ADJUSTED) AND NONVETERANS
BY WORK EXPERIENCE CATEGORY, 1981

(INCOME IN THOUSANDS OF DOLLARS)

TABLE 2

MEDIAN INCOME OF MALE VETERANS (AGE-UNADJUSTED AND AGE-ADJUSTED) AND OF
MALE NONVETERANS BY WORK EXPERIENCE CATEGORY, 1981
(Age in 1982)

Work Experience Category	All Males	Veterans		Non-Veterans
		Not Age-Adjusted	Age-Adjusted	
Total	\$14,800	\$18,630.	\$14,000	\$12,320
Year-round, full-time	21,070	23,650	20,670	19,040
Part-year or part-time ^{1/}	8,850	12,160	8,630	7,720
Did not work	5,980	7,390	6,670	5,180

^{1/} Data reflect the income of individuals in each of the following work experience categories: (1) year-round, part-time; (2) part-year, full-time; and (3) part-year, part-time.

FIGURE 4

MEDIAN INCOME OF VETERANS AND NONVETERANS BY WORK EXPERIENCE CATEGORY AND AGE, 1981
(In thousands of dollars)

The differences between veterans' and nonveterans' median income within each work experience category were not as large as the overall difference between the median incomes of the two groups in 1981. Year-round, full-time workers (male veterans and nonveterans) earned over 21 thousand dollars (Figure 4 and Table 2). Veterans who worked year-round, full-time had a median income of nearly 24 thousand dollars, compared with 19 thousand dollars among similar nonveterans (Table 2 and Figure 4). Age adjustment of veterans' income reduced this almost five thousand dollar gap by three thousand dollars.

As one might expect, the income (\$8,850) of part-year or part-time male workers was considerably less than that of year-round, full-time male workers (Table 2). However, this figure includes the income of partially employed husbands whose wives worked year-round, the income of students with part-time year-round jobs, and the income of retired persons with year-round, part-time jobs, as well as the income of males who were unemployed during part of 1981. Veterans employed part-year or part-time had a median income of more than 12 thousand dollars, while comparable nonveterans had a median income of only about \$7,700, or \$4,000 less than that of veterans. Age adjustment reduced the veterans' median income by about \$3,500, to \$8,630, or to within a thousand dollars of the median for nonveterans.

Those males (veterans and nonveterans) who did not work at all during 1981 had a median income of about 6 thousand dollars. Non-working male veterans had an income of about \$7,400, whereas their nonveteran counterparts had an income of only about \$5,200, or about \$2,000 less than the income for non-working veterans during the year. Age-specific median incomes by work experience category for veterans and nonveterans are shown in Figure 4 and Table 3.

CONCLUSION

Data provided by the Census Bureau indicate that four of every five males aged 20 years or older worked at some point during 1981, whether veteran or nonveteran. However, a larger percentage of veterans worked year-round, full-time than did nonveterans, 64 percent and 56 percent, respectively. The greater full-time employment of veterans was reflected in their higher overall median income: \$18,630 for all veterans, compared with \$12,320 for nonveterans. Age differences between the two groups account for much of this disparity in income and work experience; veterans are an older group than nonveterans, and consequently have a smaller percentage at the ages that are at greatest risk of being totally or partly unemployed during the year.

^{1/} Base population less than 75,000.

APPENDIX A: THE TECHNIQUE OF AGE-ADJUSTING

The age distribution of veterans differs considerably from that of nonveterans because of the periodic nature of wars and the resulting formation of greater veteran populations during those specific periods. The largest group is comprised of veterans of World War II, all of whom are 50 years old or older, and who number more than 11 million out of the 28.7 million living veterans (Figure 5). Because the work experience and income of men differ considerably according to age, comparisons between veterans and nonveterans can only be made on a realistic basis by making their age distribution comparable. In this report, age adjustment is accomplished by the following technique:

1. The ratio of nonveteran/veterans is computed for a specified age group.
2. Within that age group, the number of veterans in each income or work experience group is multiplied by this ratio.
3. This process is repeated over all age groups.
4. The resulting numbers are then added across all age groups, to yield the total age-adjusted number of veterans by income or work experience.
5. Medians or percent distributions are then computed, based on the age-adjusted profiles.

Thus, the age-adjusted number of veterans in the i -th income or work experience group, N'_{vi} can be expressed mathematically as follows:

$$N'_{vi} = N_{vai} \times (N_{na}/N_{va})$$

where "a" refers to the a -th age group,
"i" refers to the i -th income or work experience group
"v" indicates reference to a veteran group,
and "n" indicates reference to a nonveteran group.

FIGURE 5

PERCENT DISTRIBUTION OF MALE VETERANS AND NONVETERANS BY AGE, 1982

APPENDIX B

The following tables present in greater detail the data that are discussed in the text of this report. As a result, various specific categories are presented here which are not mentioned in the report text. For example, the figures presented in these tables are categorized according to veterans who served in wartime and those who served in peacetime. In the text, data are combined for wartime and peacetime veterans.

Tables

B-1: Work Experience in 1981 of War Veterans and Nonveterans in the Civilian Noninstitutional Population, by Age	12
B-2: Work Experience in 1981 of Post-Korean Peacetime Veterans and Nonveterans in the Civilian Noninstitutional Population, by Age	14
B-3: Personal Income in 1981 of Male War Veterans and Nonveterans in the United States, by Age	16
B-4: Personal Income in 1981 of Male War Veterans and Nonveterans in the United States Who Worked Year-Round, Full-Time, by Age.	18
B-5: Personal Income in 1981 of Male War Veterans and Nonveterans in the United States Who Worked Part-Year or Part-time, by Age	20
B-6: Personal Income in 1981 of Male War Veterans and Nonveterans in the United States Who Did Not Work, by Age.	22
B-7: Personal Income in 1981 of the Male Peacetime Veterans and Nonveterans in the United States, by Age	24
B-8: Male Peacetime Veterans and Nonveterans in the United States Who Worked Year-Round, Full-Time, by Age.	26
B-9: Male Peacetime Veterans and Nonveterans in the United States Who Worked Part-Year or Part-time, by Age	28
B-10: Male Peacetime Veterans and Nonveterans in the United States Who Did Not Work, by Age.	30
